

A blurred background image showing several people in an office environment, some sitting at desks with computers and papers, others standing. A large computer monitor in the foreground displays a software interface with a red icon of a folder and gear.

How to avoid a Failed Project Management Software Implementation

Tip #1

Ask your team about their common pain points on current tools so you can address them in your hunt.

Tip #2

Buyers and users need to align-get clear on which tools your team finds critical for daily work.

Tip #3

Review resources like our tech trends survey to learn from peers budgets, needs, and pain points.

Tip #4

Set up demos with vendors to evaluate efficiencies, functionalities, and user-friendliness.
